Conclusions

This EIA registration has been prepared for the construction and operation of the proposed WWTP by DND and their consultant (Dillon) on behalf of the Town. The information provided in this document is based on the current available design/planning information and existing environment information obtained in 2014.

The applicable environmental components and project impacts effects were assessed and presented with meaningful mitigation measures to minimize and in some cases eliminate the potential for significant effects. Based on these project and environmental interactions, it can be concluded that with the proper mitigation and standard operating procedures as outlined in this document, the residual effects of the project would be considered not significant for all project components and that the project would provide a net positive effect for the DND and the Town. This includes an upgraded facility and a potential regional employment increase.
